running costs -
1 year
payback

COOLNOMIX AC-01[®] For Air Conditioning Units

COOLNOMIX AC-01[®] is a replacement intelligent thermostat for any fixed temperature, compressor-driven airconditioning equipment.

COOLNOMIX AR-01[®] For Refrigeration Units

COOLNOMIX AR-01[®] is a replacement intelligent thermostat for any compressor-driven refrigeration equipment. This includes equipment used to cool meat and dairy products, drinks and other perishable foods in supermarkets, restaurants and food outlets.

How does COOLNOMIX[®] work?

In traditional thermodynamic control systems, the compressor continues to run even after the space being cooled is at the correct temperature, thereby wasting energy. But COOLNOMIX[®] utilises a unique and advanced technology called Optimized Refrigerant Supply (ORS[®]), which relies on a cutting edge combination of thermodynamic and hydraulic control. Once the compressor has finished its useful work, ORS[®] makes sure it doesn't continue to run needlessly.

What are the benefits of installing COOLNOMIX®?

- Typically payback within one year
- Reduced running costs of up to 30% or more
- First-rate temperature stability
- No dripping and icing even in very high humidity
- Small, convenient and hassle-free to install
- Reduced carbon footprints
- Zero maintenance
- And much more
